Sustainability Statement

The purpose of this document is to present the Sustainability Program of American Chemet Corporation. The prominent activities that contribute to the sustainability of American Chemet are outlined below.

ISO 9001:2015 Certification

American Chemet Corporation is certified under the international standard for quality, ISO 9001:2015. This certification ensures that consistent products are produced each time and promotes continual improvement in all facets of the business. This certification also ensures that American Chemet is continually improving a sustainable business strategy and metrics including safety, profitability, raw material supply reliability, dependable production capacity and succession planning.

ISO 14001:2015 Certification

American Chemet Corporation is certified under the international standard for environmental stewardship, ISO 14001:2015. Certification under this standard ensures potential environmental risks and opportunities are identified and managed. This also ensures that American Chemet is continually improving on its environmental performance in preventing pollution, controlling emissions, reducing waste, conserving water and energy, and complying with all applicable laws and regulations.

Benefits of Products

American Chemet's products Move, Shelter, and Feed the World. Chemet provides products that are used to improve the world. From marine anti-fouling coatings to building materials, Chemet's products work to reduce greenhouse gas emissions, make industries more efficient, and make building products more enduring.

Regulatory Defense of Metal-Based Products

American Chemet is a large player in the global sustainability of its products through active membership in numerous industry associations including the American Chemistry Council Copper Task Force, the International Paint and Print Ink Council Antifouling Coatings Committee, the American Wood Protection Association, The American Coatings Association and the EU Copper Antifouling Task Force.

The actions taken by American Chemet will ensure business sustainability as the company meets the needs of the present without compromising the ability of meeting the needs of the future.
